RISK CONSIDERATIONS

The funds within our four families of money market products may be exposed to the following risks which may negatively impact their performance:

Currency risk: where your reference currency differs from the currency of the share class, you will receive payments in a different currency, so the final return you will get depends on the exchange rate between the reference currency and your local currency.

Financial derivatives risk: the leverage resulting from derivatives amplifies losses in certain market conditions.

Sustainability risk: the risk arising from any environmental, social or governance events or conditions that, were they to occur, could cause a material negative impact on the value of the investment.

All forms of investment involve risk. The value of investments and the income derived from them is not guaranteed and it can fall as well as rise and you may not get back the original amount invested.
